

SODIUM BENZOATE

PRODUCT IDENTIFICATION

CAS NO	532-32-1
EINECS NO.	208-534-8
FORMULA	C ₆ H ₅ CO ₂ Na
MOL WT.	144.12
H.S. CODE	2916.31
TOXICITY	Oral rat LD50: 4070 mg/kg

SYNONYMS Benzoate of soda; sodium salt of benzoic acid; Benzoan sodny; Benzoate de sodium; Benzoate sodium; Benzoesaure (German); NA-SALZ (German); Sobenate; Sodium Benzoic Acid; Ucephan; Benzoan Sodny (Czech);

DERIVATION

CLASSIFICATION

GENERAL DESCRIPTION

Sodium Benzoate (the sodium salt of benzoic acid) is a colorless or white crystalline powder or granular. It is soluble in water and slightly soluble in alcohol. It is used as one of the principal antimicrobial and antifungal preservatives used in foods, beverages, cosmetic, dental care products, and pharmaceuticals, but it's concentration is limited usually not exceeding 0.1% because it is poisonous. Antimicrobial activity is effective in acidic conditions (pH 4.5 or lower). The lower the pH level, the greater the effectiveness is expected. It is also used in medications, anti-fermentation additives and tableting lubricant for pharmaceuticals. It may also be used as a test for liver function. The industrial applications are as a corrosion inhibitor in antifreeze products, as a nucleating agent for polyolefin, as a dye intermediate, and as a catalyst. Potassium Benzoate (the potassium salt of benzoic acid) is an alternative to sodium benzoate. Potassium Benzoate replaces sodium benzoate where low sodium content is required.

PHYSICAL AND CHEMICAL PROPERTIES

PHYSICAL STATE	White granules or crystalline powder
MELTING POINT	300 C
BOILING POINT	
SPECIFIC GRAVITY	1.44
SOLUBILITY	Soluble
pH	
VAPOR DENSITY	4.97
NFPA RATINGS	Health: 1; Flammability: 0; Reactivity: 0
REFRACTIVE INDEX	
FLASH POINT	
STABILITY	Stable under ordinary conditions

APPLICATIONS

food preservative, antiseptic medications, tobacco, tableting lubricant for pharmaceutical, dyes intermediate, mildew inhibitor.

SALES SPECIFICATION

APPEARANCE	White crystalline or granular, Odourless powder
PURITY	99.0% min
HEAVY METALS	10ppm max
TOTAL CHLORINE	300ppm max
MOISTURE	0.5% max

ARSENIC	3ppm max
SOLUBILITY	Pass test
ALKALINITY	0.04% max
TRANSPORTATION	
PACKING	25kgs in bag
HAZARD CLASS	not regulated
UN NO.	
DESCRIPTION OF BENZOIC ACID	
<p>Benzoic acid, a white, crystalline organic compound, is a family carboxylic acids. It has a carboxyl group bound directly to a benzene ring. Though it occurs naturally in some plants, It is commercially manufactured by the reaction of toluene with oxygen at temperatures around 200 C in the presence of cobalt and manganese salts as catalysts. Pure benzoic acid melts at 122 C and is very slightly soluble in water. It is widely used as a food preservative, normally as the sodium, potassium, or calcium salts and their derivatives especially in acid foods. Benzoate preservatives applications in foods, drugs and personal products are well established. It is also widely as an intermediate for chemicals, alkyd resins, polyesters, plasticizers, dyestuffs, preservatives, and rubber activators and retardants. Benzoic Acid is a diverting agent in crude oil recovery applications.</p>
